DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4, drawn to a bracket, classified in class 16, subclass 319.
 - II. Claims 5-10, drawn to a method for installing a foldaway hand rail, classified in class 29, subclass 428.
 - III. Claims 11-17, drawn to a handle or handrail assembly, classified in one of class 256, subclass 65.16 or class 280, subclass 762.
2. The inventions are distinct, each from the other because of the following reasons:
 - a. Inventions II and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process for using the product as claimed can be practiced with another materially different product, e.g. a bracket that does not include a pivot pin or a biasing member.
 - b. Inventions II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that

Art Unit: 3679

product (MPEP § 806.05(h)). In the instant case the process for using the product as claimed can be practiced with another materially different product, e.g. the process can be accomplished by welding a foldaway hand rail assembly to the surface of the vehicle after the hand rail is attached to the bracket.

c. Inventions III and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the brackets do not require a biasing member to bias a handle to either an in use position or a stored position. The subcombination has separate utility such as a bracket for pivotally attaching a ladder to the rear of a watercraft.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
